

iMapInvasive Training

Conducted by SLELO PRISM

nyimapinvasives.org is New York State's online mapping tool and database for invasive species observations and coordination. This training will cover the new 3.0 version.

Early detection of invasive species is critical to help reduce their impacts. With invasive species in our area, such as the Emerald Ash Borer, and new ones coming, reporting your observations will be a key component in reducing their spread and impact.

Come learn how to use this great tool and recognize some of the local invasive species!

When

July 19, 2019 from 11am—2:30pm

Where

St. Lawrence University's

Wachtmeister Field Station

Co Rd 27, Canton, NY 13617

From Canton, head south on Park St./CR 27
after you pass the university and cross the bridge,
it's the first left

Training will include an indoor session covering invasive species ID, online iMap 3.0 training, and an intro to the mobile app with an outdoor field session. A smartphone is recommended for training.

Please bring a bagged lunch, beverage & dress for outdoor weather!
