

SLELO PRISM Hemlock Woolly Adelgid Walk & Talk

Date/Time: Friday, October 25th 3pm-5pm

Meeting Location: [Wachmastier Field Station](#) located on County Rt. 27 in Canton, NY

We will meet at 2:50pm at the Wachmastier Field Station and carpool to the Pike Road entrance to the Kip Trail for a guided walk.

Help Protect Hemlock Trees

An invasive insect called Hemlock Woolly Adelgid (HWA) kills hemlock trees. Hemlocks are a key tree species and loss of hemlock populations would dramatically reduce the overall health of our forests and urban green spaces. **Help us track the spread and absence of this invasive forest pest.**

Join us for a Guided Walk and Learn How You Can Help

We Will Cover the Following Topics:

- ❖ Hemlock Woolly Adelgid Impacts/Signs of Infestation
- ❖ Hemlock Tree Identification & Ecology
- ❖ How to Survey for HWA
- ❖ How to Report Observations Using the iMapInvasives Mobile App
- ❖ Citizen Science/Volunteer Opportunities
