2017 marks the second season of an intense effort to reduce the introduction and spread of aquatic invasive species (AIS). Through a $100k grant from the NYS DEC Invasive Species Spread Prevention Grants Program (NYS Environmental Protection Fund) four AIS stewardship specialists were strategically placed at high use/high priority boat launches along Eastern Lake Ontario and the data collected tells a real story.
2017 Statistics

- 626 boaters engaged (2 year total = 1,657).
- 14% from out of state/country.
- Aquatic organisms found on 9% of boats in 2017 compared to 67% in 2016. Likely due to lake water levels.
- 89.6% of all participants received AIS “Clean-Drain-Dry” literature.
- Top 3 travel routes identified: Route 3, Route 81, Route 12-E.

Season Summary for Eastern Lake Ontario

In 2017, four aquatic invasive species Stewardship Specialists served as Boat Launch Stewards for a 12 week period, June through August and worked Wednesdays through Sundays to maximize boater engagement.

Stewards were placed at four strategic locations along Eastern Lake Ontario to include: Oswego Harbor, Henderson Harbor, Sackets Harbor and at Cape Vincent.

Collecting Information

The field data forms that our stewards populate during their conversations with boaters have 14 questions designed not only to learn about boater habits, but to collect data that can be used to evaluate invasive species prevention efforts.

Questions include:

- Boat type, motor, personal watercraft, sailboat, canoe, kayak, rowboat.
- Group size
- State of Registration
- Launching/retrieving
- Time of inspection
- Prior contact with steward
- Does the visitor take spread prevention steps?
- Aquatic organisms found
- Species identification
- Educational materials offered
- Waterbodies visited in last two weeks
- Waterbody the visitor will go to next
- Travel route to be taken.
- Would visitor use a decontamination station.

Pertinent information is then extracted and used to make determinations as to the spread of aquatic invasive species in the decision making process.

Purpose for Boating

One question on the field data forms asks for the purpose of the watercraft’s outing. In 2017, 64% of boaters engaged were for the purpose of fishing, 35% were for the purpose of recreation and 1% were grouped into “other” category. Other refers to such purposes commercial and/or governmental watercraft.

Decontamination Stations

When asked if they would use a decontamination station if available: 23% stated they would not, 3% stated they were unsure and 74% stated that they would use a decontamination station.

Spread Potential

In 2017 only 9% of all watercraft (launching or retrieving) had visible plant materials/organisms on them compared to 67% in 2016. This was likely due to higher lake water levels keeping propellers and keels above weed beds combined with an overall reduction in boat activity.
Common Species Observed

Round Goby, Zebra Mussel, Quagga Mussel, Milfoil(s), Elodea Spp., Chara, Elmggrass, Curly Pondweed, Coontail, Water Chestnut, Spiny Waterflea

For More Information on the Eastern Lake Ontario Aquatic Invasive Species Spread Prevention Program.

The SLELO PRISM Program is part of a much larger program throughout New York State. Other partners are also promoting AIS spread prevention via boat launch stewards. As a whole these combined efforts should significantly slow the spread of aquatic invasive species throughout New York State waters.

In the SLELO PRISM Region this effort is implemented as a partnership between the partners of the PRISM and The Nature Conservancy CWNY. Funded in part by a grant from the New York State Department of Environmental Conservation, Invasive Species Spread Prevention Grants Program through appropriations from the New York State Environmental Protection Fund.

Spread Potential on a Larger Scale

Lake Ontario has always been a destination for fishing enthusiasts as well as recreational boating. Professional anglers participate in competitions from all over the east coast. The Salmon River in Pulaski attracts anglers on a global scale. Recreational travel-boating is also a significant activity with boaters traveling the Great Lakes, Erie Canal, Hudson River and even the so called “loop” which takes vessels from the Great Lakes down through the Mississippi River around the Florida peninsula up the Atlantic and back into the Great Lakes.

During the 2016-17 season when asked what waterbody the boater visited last or where they intend to go to next revealed the following locations/areas:

- Canada
- Adirondacks
- New Hampshire
- Florida Keys
- Pennsylvania
- Hudson River
- Alabama
- New Jersey
- Ohio River
- Louisiana
- Connecticut
- Alaska
- Finger Lakes
- Texas
